Dripstop[®]

- Hernon's[®] family of Dripstop[®] sealants are engineered to provide many distinct advantages over conventional pipe dopes for plumbing, refrigeration and hydraulic applications.
- Anaerobic pipe sealants and adhesives are superior to other sealing methods in that they contain no solvents and they do not shrink, stretch, split, rot, distort, wear out or relax over time and joints never loosen from vibration.
- Dripstop[®] sealants harden without shrinkage in the joints and create a tough, insoluble, vibration proof seal that will not leak even if the threads are damaged.
- Dripstop[®] products do not shred like tape dope and they are not subject to cold flow, pressure or temperature phenomena like non-hardening dopes.
